Stable Vertical Lift Adjustable Grooming Table

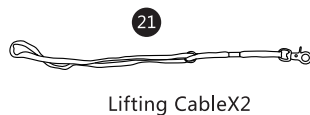

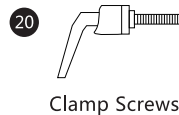

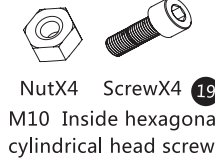

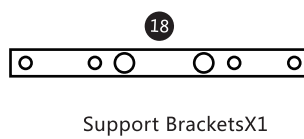

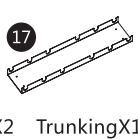

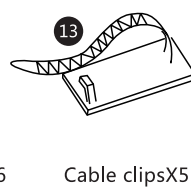

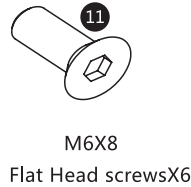

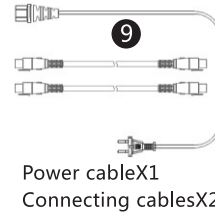

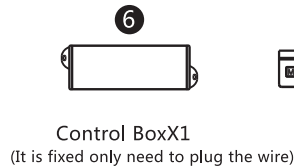

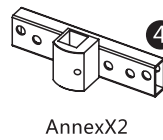

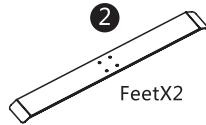

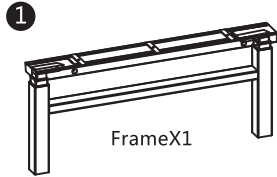

User Guide

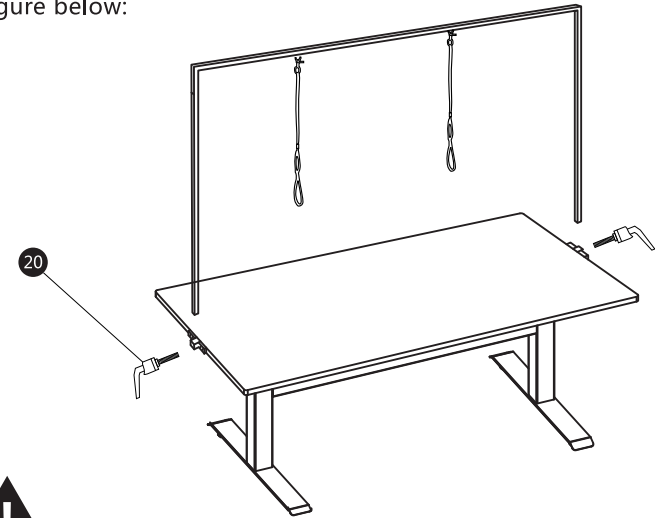

TOOLS REQUIRED

COMPONENTS

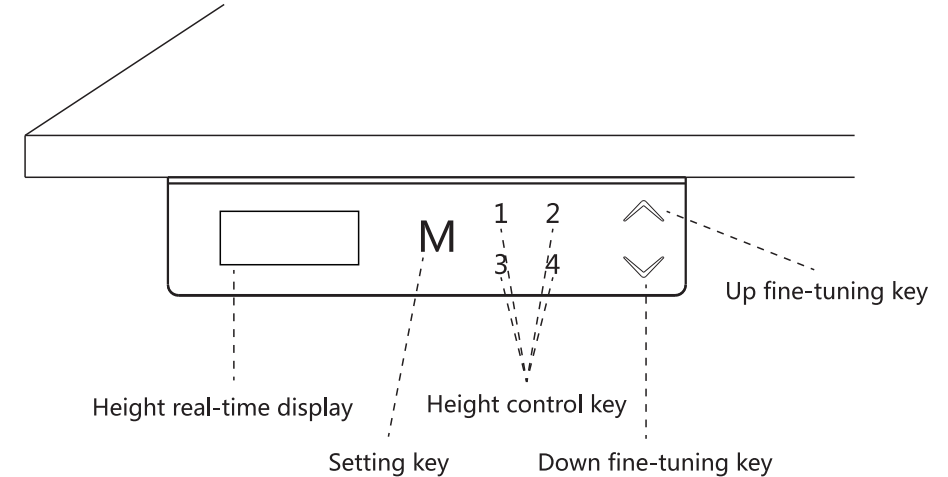

9、After assembly the arm, insert the clamp downward and adjust it to the appropriate height. Then use the clamp screw to tighten it as shown in the figure below:

THE HANDSET SWITCH MUST INITIALIZE BEFORE USING.

Initialization: press on the down fine-tuning key (hold and do not release), until the desktop drops to the lowest height. After release, click the down fine-tuning key and release it. Then press on the down fine-tuning key again for about 10 seconds, until the desktop drops slightly, then rises slightly and stops, release the down fine-tuning key to complete initialization.

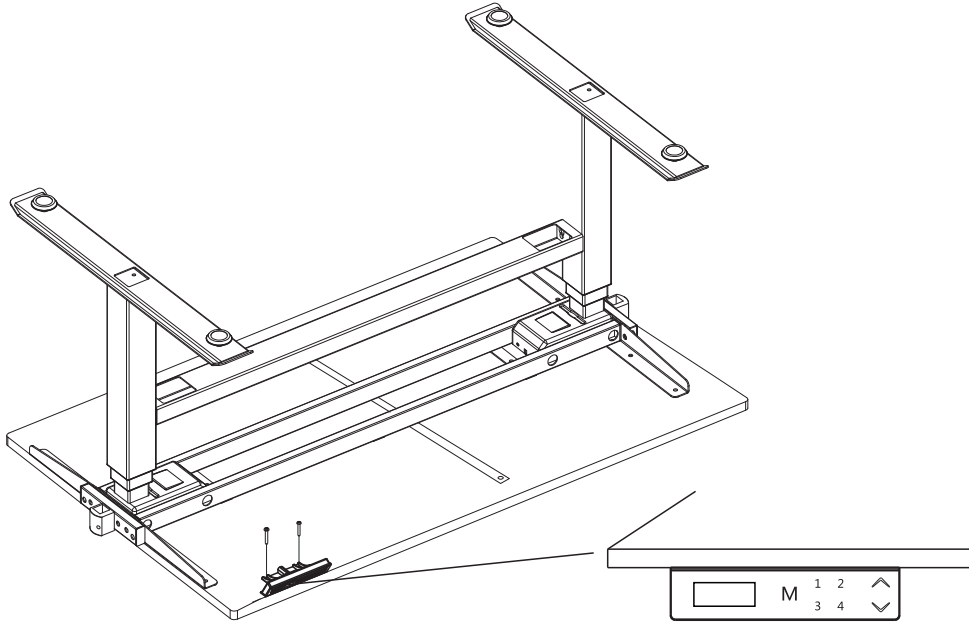

Please count accessories are complete, if there is a lack, please contact the seller.

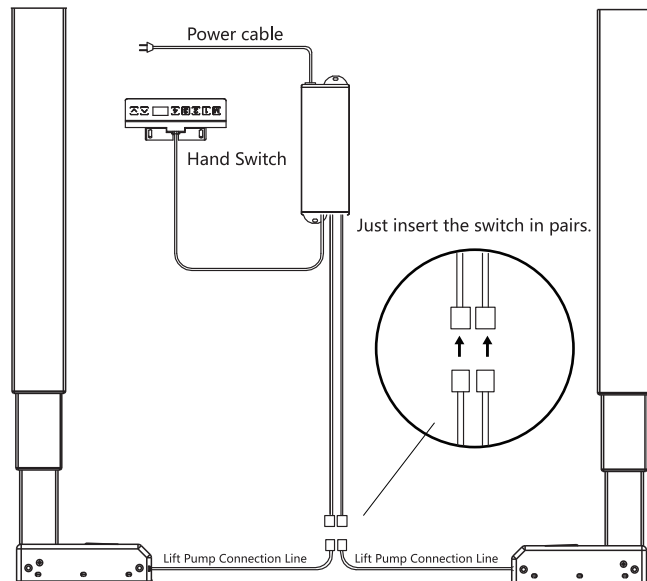

For ease and safety, we recommend two people for assembly.

Height control key setting: Use the up fine-tuning key or the down fine-tuning key to raise or lower the height what you need. Click the setting key M and click the code to be set (any of the 1-4 height control keys) after releasing it to complete the setting.

- 7、 Use pan head screws to fix the handset switch to the table.
Align the top of the switch panel with the outside of the table.

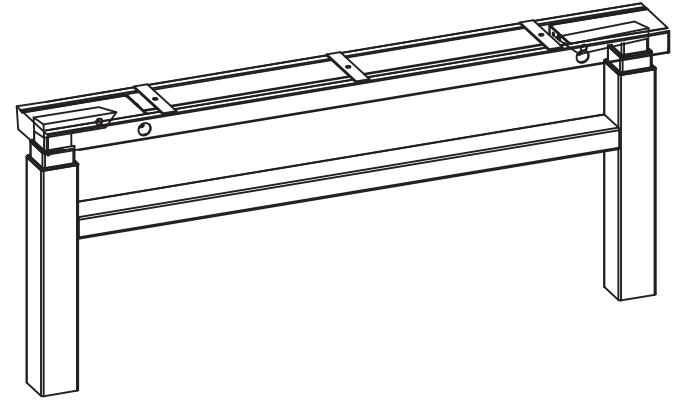

- 8、 For line connection, there are two lines on both sides of the column, which are connected with the two lines in the master control box, and it can be inserted as shown in the figure below:

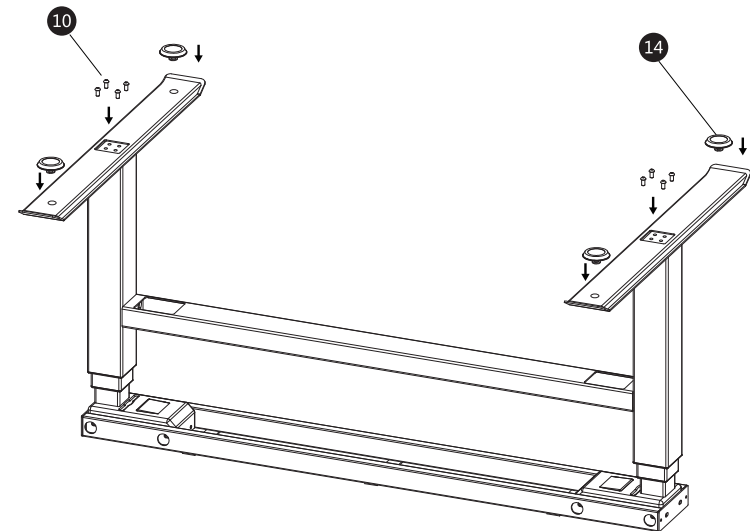

ASSEMBLY STEPS

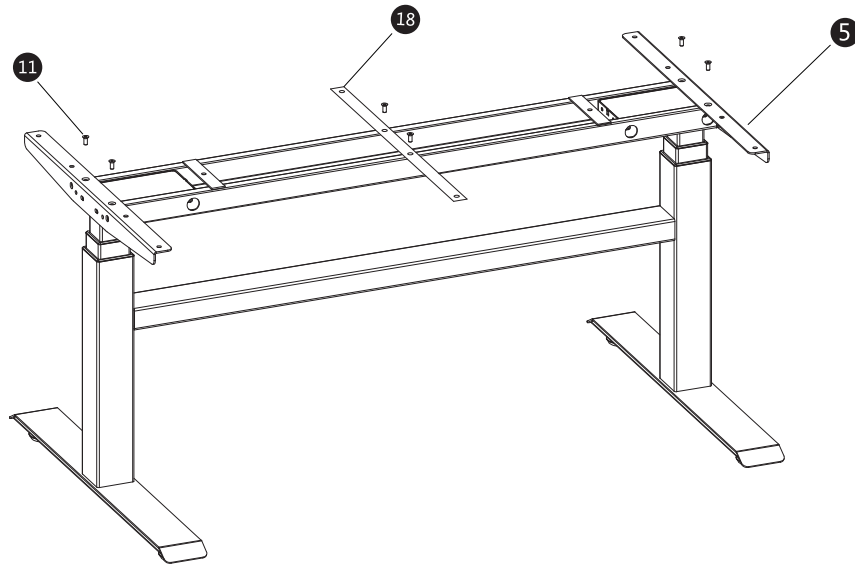

- 1、 Take the frame body out of the box, check for damage and deformation, and then invert the frame :

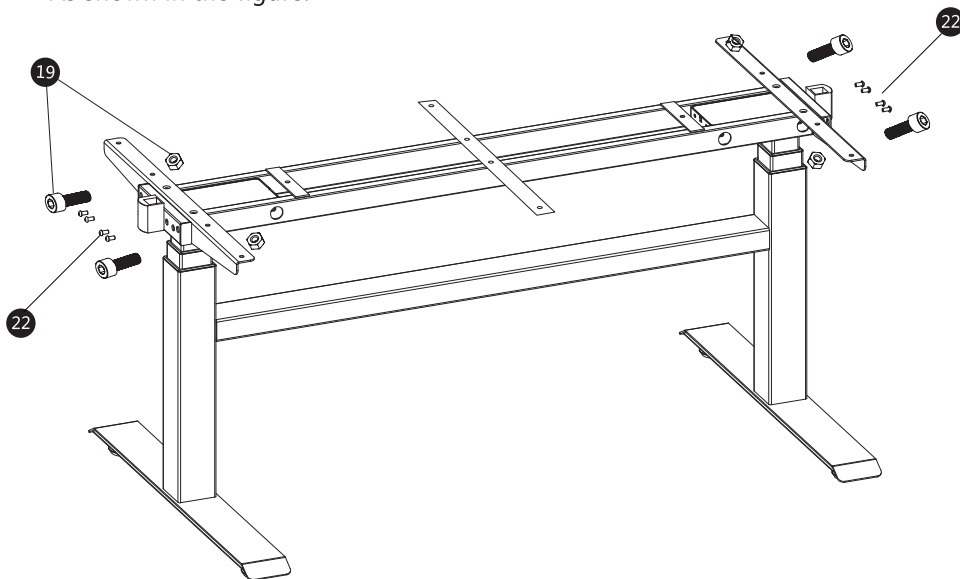

- 2、 Align the two legs facing down to the bottom of the two stand columns, fix them with machine screws to ensure the locking is not loose, and then install the four leveling studs to the bottom of the feet.

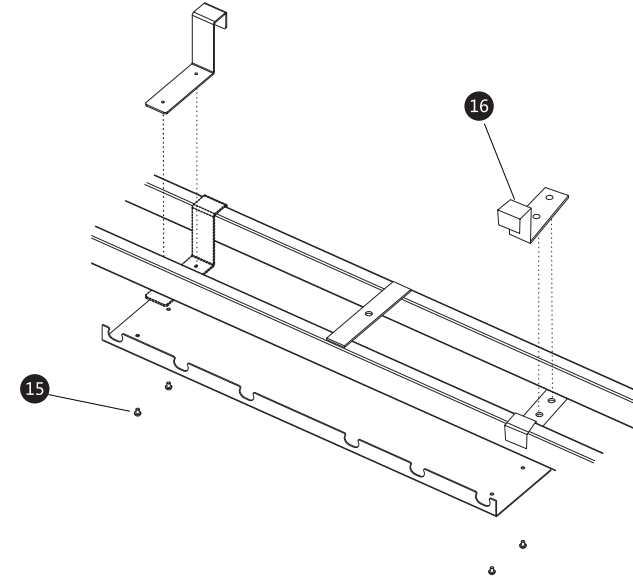

- 3、 After installing the feet and leveling studs, put the whole frame in the right position, put two side brackets and one support bracket above the frame, and then lock it with flat head screws.

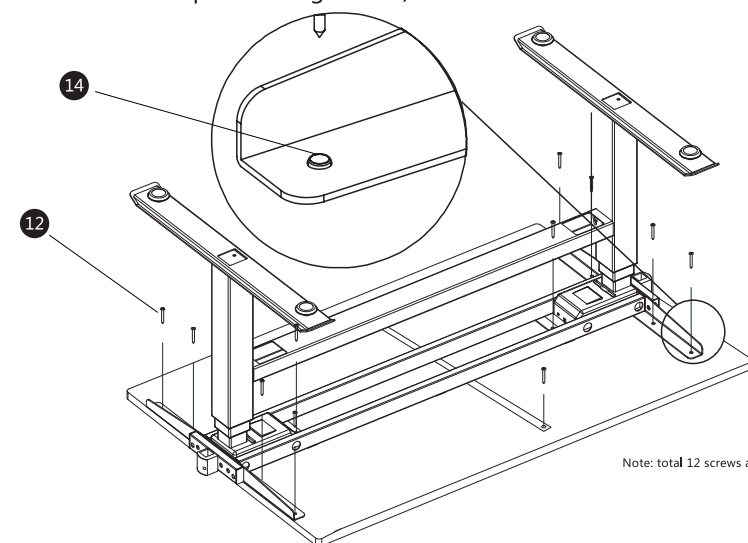

- 4、 Fix the hanger fixture to both sides of the side bracket, fix it firmly with M6X18 screw and fix with M10 inner hexagonal cylindrical head screw to ensure locking. As shown in the figure:

- 5、 Place the trunk hook as one left and one right, merge the trunking from the bottom to the top, and lock it with M4 head cap screws. Note that all connecting cables should be in the inner trunking.

- 6、 Place the table plate facing up horizontally, then invert the main crossbar end and buckle it upside down on the table plate. Make sure the table plate is on the inside of the clamp on both sides of the crossbar end, and it is in center the front and rear positions, center the left and right, and then lock the table with pan head screws. (Caution ! Please place the fittings leather pad in the hole position. Prevent screw from penetrating table .)

Note: total 12 screws are needed to tighten the table.
