

## Aeolus Pet Drying Cabinet TD-907T

Aeolus Pet Drying Cabinet TD-907T provides you with a more comfortable, relaxing, efficient, safer, healthier and easier way to dry your pets after a bath.

### Quiet Running

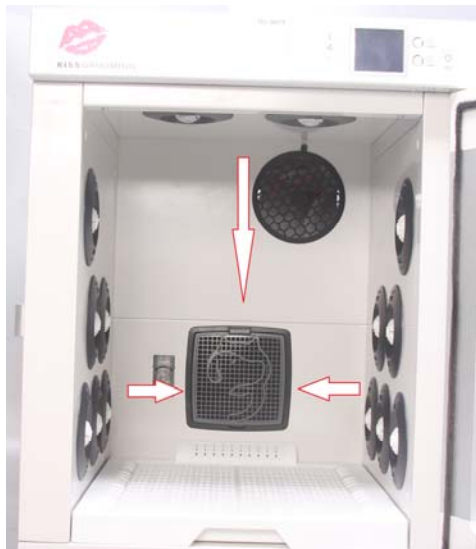

Only strong wind can dry your pets at a much higher rate. But the loud blowers will easily irritate and frighten pets for their even more acute hearing. Aeolus Pet Drying Cabinet TD-907T is up to 90% quieter than most other similar products in the market. Even cats, which are more sensitive than dogs, will feel more comfortable and be relaxed and quiet with high probability. Of course groomers will also love a quieter dryer.

### Super Efficiency

Not only does the Aeolus Pet Drying Cabinet TD-907T produce a less stressful experience for the pets, it also saves labor, expense and time. The enclosed circulation of heated air makes a fast and energy-saving drying. When one pet is being dried in the cabinet, groomers can start drying another.

Much greater efficiency will thus be achieved.

### Safe Grooming

Most groomers place pets on a table or platform to dry them. Many cat/dog scratch accidents happen during drying process. Drying cats are always a sore trial to experienced groomers.

Nervous pets always try to flee and end up with falling and injury. These potential dangers are eliminated by Aeolus Pet Drying Cabinet TD-907T. The vent holes on the underside of the door ensure pets' breath. Anti-overheating system will shut down the machine when the temperature is over 40°C.

### Near Infrared Treatment

The infrared lighting also makes for a healthier drying experience. The Infrared Therapy stimulates animal body recirculation, accelerates blood flow and help raise tissue cell vitality. It reduces granulation edema, improves partial tissue nutrition and promotes the skin infection recovery greatly.

### Negative Ion Therapy

Pet hair often gets tangled and Aeolus Pet Drying Cabinet TD-907T will dispense hot air with highly concentrated negative ions to help close hair cuticles, get the coat more moisturized and make hairs a lot easier to comb and brush.

The negative ions is also defined as “vitamins in air”, which could purify air and settle down particles in the air, make the internal environment cleaner and healthier.

### Simple Operation and Maintenance

What you need to do is just to choose the mode, set temperature, wind speed and time. The standing floor, waste fluid trays and air inlet filters are easy to clean and be replaced.

### Aroma and Oxygen Therapy

Aroma and oxygen therapy can be carried out to pets during drying. These value-added services can be provided by loading the aromatics and oxygen-generating agent without opening the door.
